

1-3 Hour, Medium Format Live Presentation (Dental Societies & Study Clubs)

Life In The Fast Lane: Invisalign Update

Course Summary

This course is designed as a general update for dental society meetings with specialists in attendance. Minor Tooth Movement experienced a seismic shift at the turn of the millennium. Invisalign revolutionized the way we perform orthodontic treatment, using an esthetic alternative to traditional brackets and wires. This highly esthetic modality has moved from simple science to incredibly high tech computer modeling, delivering realistic and predictable results.

Dr. Brian Gray will review the history, science, challenges and future of the Invisalign Orthodontic System.

Prerequisites: None

Learning Objectives

- Provide a general overview of the Invisalign System for doctors and their teams, in particular specialists and non-users.
- Review the history, development and present state of minor tooth movement in dentistry.
- Dispel myths and assumptions associated with the Invisalign System.
- Provide guidance on case selection to achieve optimal outcomes.
- Share how all dentists, including orthodontic specialists benefit from Invisalign in the general practice setting.
